

medicaltracker

For first-aiders, office staff, and DSLs.

For daily users.

First to know.

You're the one a child finds first. Shouldn't the system be just as quick?

You're the person a child comes to when they feel unwell, the one who knows which students carry an EpiPen, and the one who has to remember every care plan, every allergy, every dose, usually while three other things are happening at once.

Most schools are still asking you to do that job with paper forms, a filing cabinet, and your own memory as the backup system.

Medical Tracker was built by people who understood that wasn't good enough, for you or for the children you're responsible for.

Less admin. More confidence. Everything you need, the moment you need it.

4,000 schools

Built for first-aiders

97% renewal rate

DfE/HSE compliant

Now integrating with CPOMS! One integration. Zero duplication.

medicaltracker

For first-aiders, office staff, and DSLs.

You shouldn't have to choose between caring for a child and getting the paperwork right. With Medical Tracker, you don't.

A day with Medical Tracker

08:45 A new starter arrives. Their personal details are already in the system, visible to every member of staff who needs to see them, instantly.

10:15 A child needs their lunchtime medication. One tap logs the administration, the time, and the dose, no more relying on memory.

12:30 A fall in the playground. The incident is logged in under a minute, parents are notified with customisable preferences, and nothing gets forgotten by home time.

15:20 A parent asks what happened. You already have the answer, timestamped, accurate, and ready to share.

What you get

Care plans, instantly

Every child's health needs, allergies, and emergency protocols, searchable in seconds.

Specialist medication logging

Record every administration to a clinical-grade accuracy to ensure specialist care logging for every need.

Parent communication

Customisable updates to parents/carers after an incident; one less phone call for you to make.

Stock and expiry alerts

Know before an EpiPen or inhaler expires. No more discovering a gap in supply at the worst possible moment.
